

**FR AVANT UTILISATION :**

- S'assurer d'une condition physique suffisante. Certaines pathologies ou médicaments, l'abus d'alcool ou la consommation de drogue peuvent représenter un danger.
- Lors de l'installation, une vérification de la pose et de la fixation doit être réalisée pour prévenir de tout dommage.
- Examiner l'échelle pour vérifier que le produit ne soit pas endommagé et qu'il puisse être utilisé en toute sécurité.
- Vérifier périodiquement (au moins une fois par an) votre produit, fiches descriptives et notices.
- Vérifier que le produit soit adapté au travail.
- Ne pas utiliser l'échelle endommagée.
- Eliminer les débris étrangers.

Avant toute utilisation dans le cadre professionnel, procéder à l'évaluation des risques en vertu de la législation du travail et du plan d'utilisation.

Vérifier si l'échelle est correctement positionnée et équilibrée.

Vérifier le serrage de la base rapportée.

Vérifier que l'échelle est conforme aux informations présentant sur l'étiquette constructeur.

Vérifier la présence des deux axes en partie haute de l'échelle.

**MISE EN PLACE DU PRODUIT :**

- Le produit doit être dressé aux angles corrects sur un sol plat et stable : pour une échelle d'appui : angle entre 65° et 75° et solide fondation pour une échelle à plateforme : angle entre 75° et 85° et solide fondation complète du produit ; lors de la mise en place auto-stable, vérifier le bon encadrement et la position de l'échelle.

Sur les échelles munies de plusieurs plates, les dispositifs de verrouillage doivent être enclenchés.

L'échelle doit être placée sur une surface régulière, plane et ferme. Les échelles d'appui doivent être stabilisées après utilisation, par exemple au moyen d'entraînements ou d'un dispositif approprié.

Utiliser des échelles / escabeaux non conductrices pour les travaux devant être effectués avec des matériaux conducteurs.

Ne pas utiliser le produit dehors lorsque les conditions météorologiques sont défavorables (orage, ...).

Ne pas utiliser l'échelle pour porter des enfants.

Sécuriser les portes (mais pas les serrures de sécurité) et fenêtres sur lesquelles l'échelle peut être posée (pas les serrures de sécurité).

Monter et descendre en faisant face au produit.

Tenir fermement le produit en montant et en descendant (ne pas descendre ou monter avec les pieds).

Ne pas utiliser le produit comme pont (produit à l'horizontal ou fortement incliné).

Porter des gants appropriés.

Éviter toute contrainte latérale excessive (pression, ...).

Observer des distances minimales entre l'échelle et la fenêtre.

Ne pas dépasser la hauteur maximale de l'échelle / escabeau d'appui d'au moins 1 m au-dessus du point à atteindre.

Les échelles doivent être placées de manière à ce que l'angle de l'échelle / escabeau doive être léger et assuré à manipuler.

Se tenir à l'abri de l'échelle / escabeau pour éviter de se faire éjecter.

Les réparations doivent être effectuées par le fabricant.

Stockez le produit dans un environnement approprié.

**UK BEFORE EACH USE :**

- Make sure that you are in sufficiently good physical condition. Certain illnesses, alcohol or consumption of drugs may lead to harm or injury.

The installation must be used to prevent any damage during transport of the product.

Examine the ladder after delivery and prior to first use to check that all the parts are in good condition and in working order.

Check the manufacturer's instructions for use (on the box or on the year), sheets available at www.centaur.ie.

Check that the ladder is suitable for the work.

Never use a damaged ladder.

Remove any dirt from the product.

Check that the ladder has anti-slip straps.

Check the presence of the two axes on the ladder's upper part.

Test the lighting of the base.

Perform a risk assessment prior to use to evaluate risk in accordance with the legislation in force in the country of use.

Check that the product is in conformity with information on the manufacturer's label.

**PRODUCT INSTALLATION :**

The product must be positioned on the connect angles on flat and stable ground.

For leaning ladder: angle between 65° and 75° and firm base.

For A-frame ladder (self-stabilizing/stepless): complete opening of the product. By positioning in the leaning standing position, check that the sole of the feet are in contact with the floor.

On ladders provided with several segments, the locking mechanism must be engaged.

The product must be firm stabilized before use, by using a shock or anti-slip device.

The product must not be repositioned from a high place.

While positioning the product, take into account the risk of collision, especially with overhead power lines.

Identify any electric risks (overhead lines or other equipment).

The product must not rest on its ladder-shoe.

The product must not be positioned under trees, unless adequate additional safety precautions have been taken in order to avoid the ladder from falling down when the tree is cut or cleared.

During the use of the product, the user must be aware of the potential risks of falling objects.

Do not exceed the maximum load in use.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder without both feet on the same rung / steps.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder without an additional safety device (telescopic or a safety stability device).

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.

Do not climb above the height at which it is appropriate for the user to keep his or her waist below the two vertical rails of the ladder.
